Contents

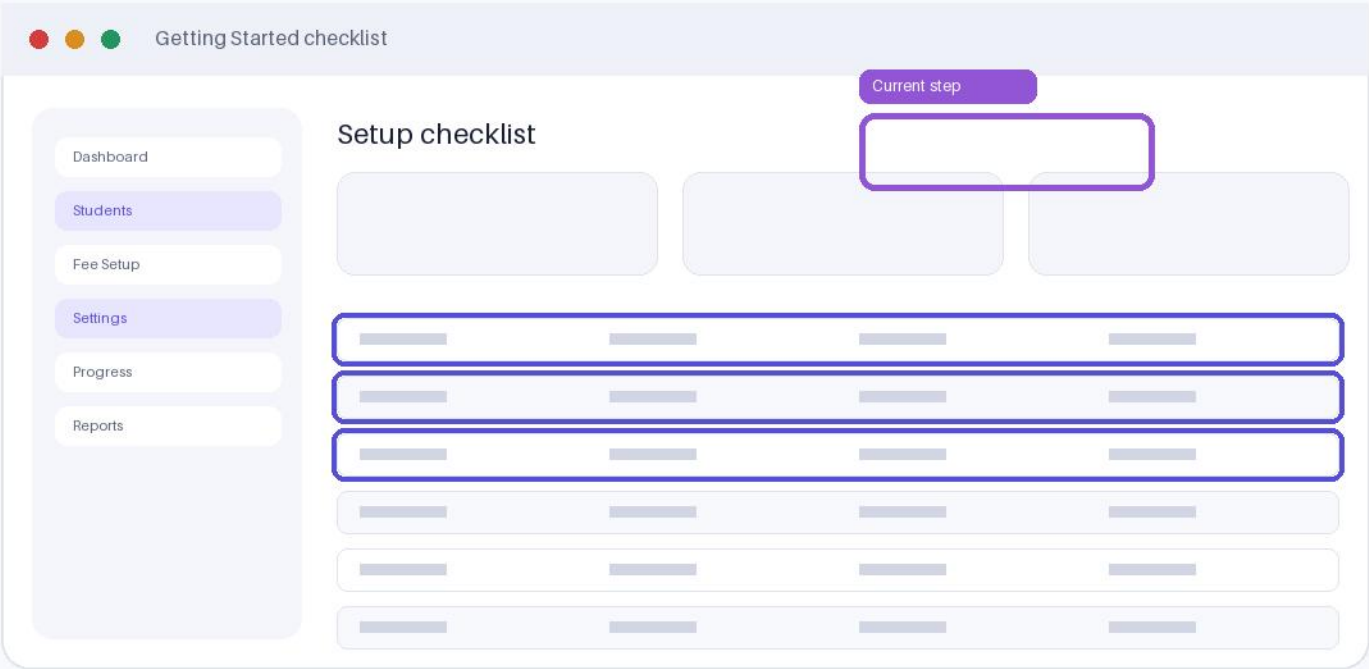

Use this manual as the canonical operating guide for EdZen AI.

1. Setup and onboarding
2. Dashboard and subscription state
3. Students, families and import
4. Academic years and promotion
5. Fee setup, payments and reminders
6. Settings, QR code and templates
7. Student Progress: subjects and assessments
8. Marks entry, attendance and report cards
9. Teacher portal and access control
10. Parent view and payment proof workflow
11. Exports, troubleshooting and best practices

1. Setup and onboarding

New schools should complete setup in this order to avoid missing templates, fees or academic data.

- **Create school and verify login**
Use the signup/onboarding flow. Email verification protects school access.
- **Open Getting Started**
Follow the guided checklist before daily operations begin.
- **Create active academic year**
All fees, assessments, enrollments and reports depend on the active year.
- **Add students and users**
Import students, then invite teachers/accountants from Users.
- **Configure settings**
School profile, QR code, message templates, assessment templates and grade mappings.

2. Students and family records

Maintain clean student data so fees, parent links, reports and attendance work correctly.

- **Manual add/edit**

Capture class, section, roll number, parent phone/email, DOB and category fields.

- **Excel import**

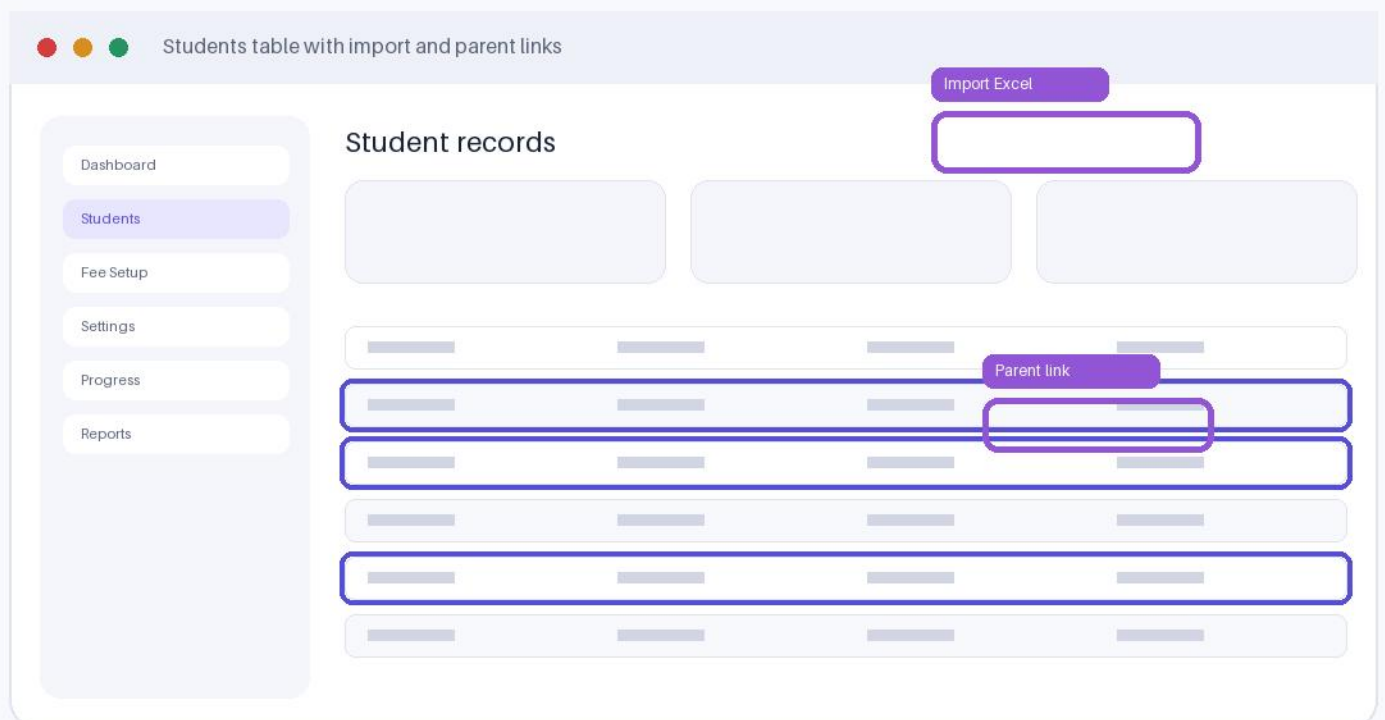

Use the import tool for bulk upload. Review imported, failed and issue rows.

- **Sibling grouping**

Students with matching parent details are grouped to simplify family follow-up.

- **Parent links**

Share secure parent links individually or in bulk from student and fee reports.

3. Fee management

Fee setup is template-driven: categories and structures are assigned to classes and then applied to students.

● Fee categories

Group mandatory and optional fee heads such as Tuition, Transport, Uniform or Books.

● Fee structures

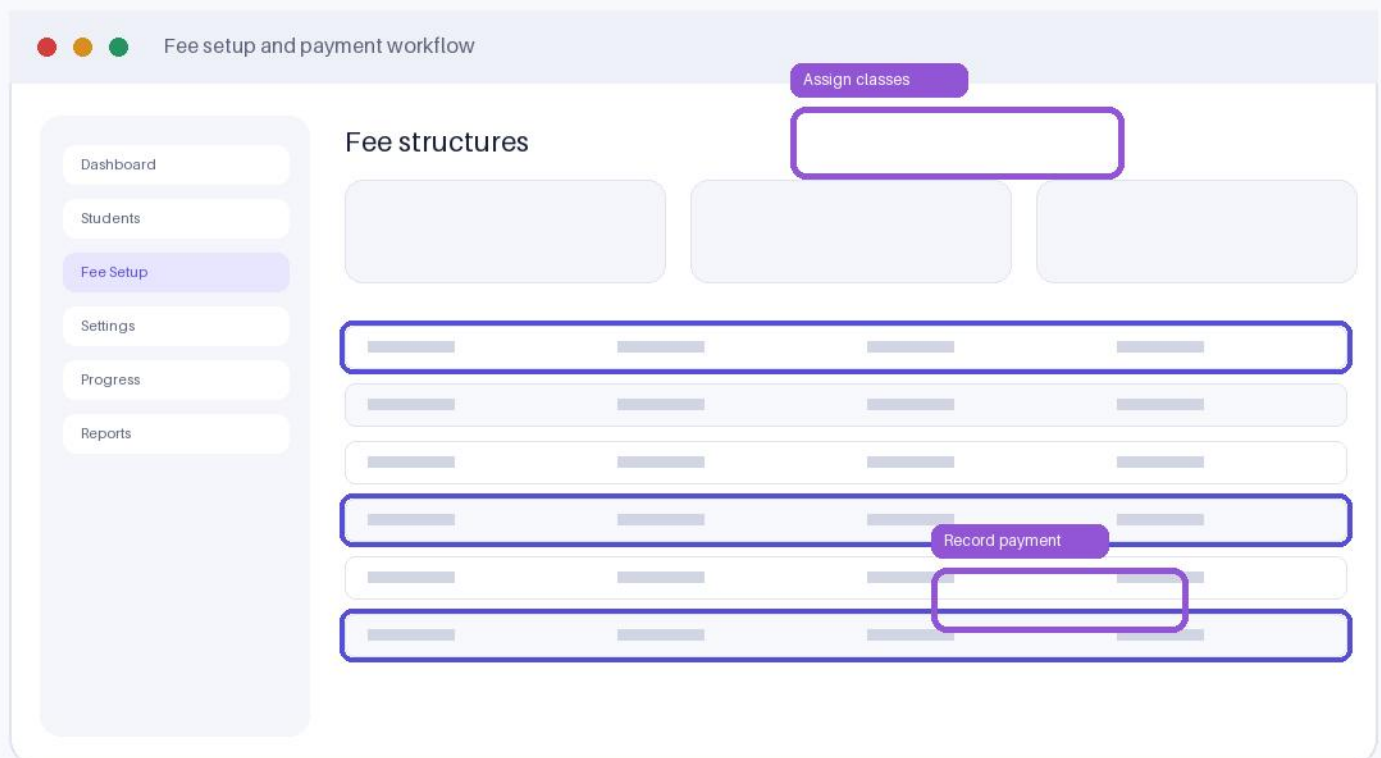

Set total amount, installments, due dates and class assignment.

● Payments

Record payments against one or more installments with mode, date and reference.

● Proof verification

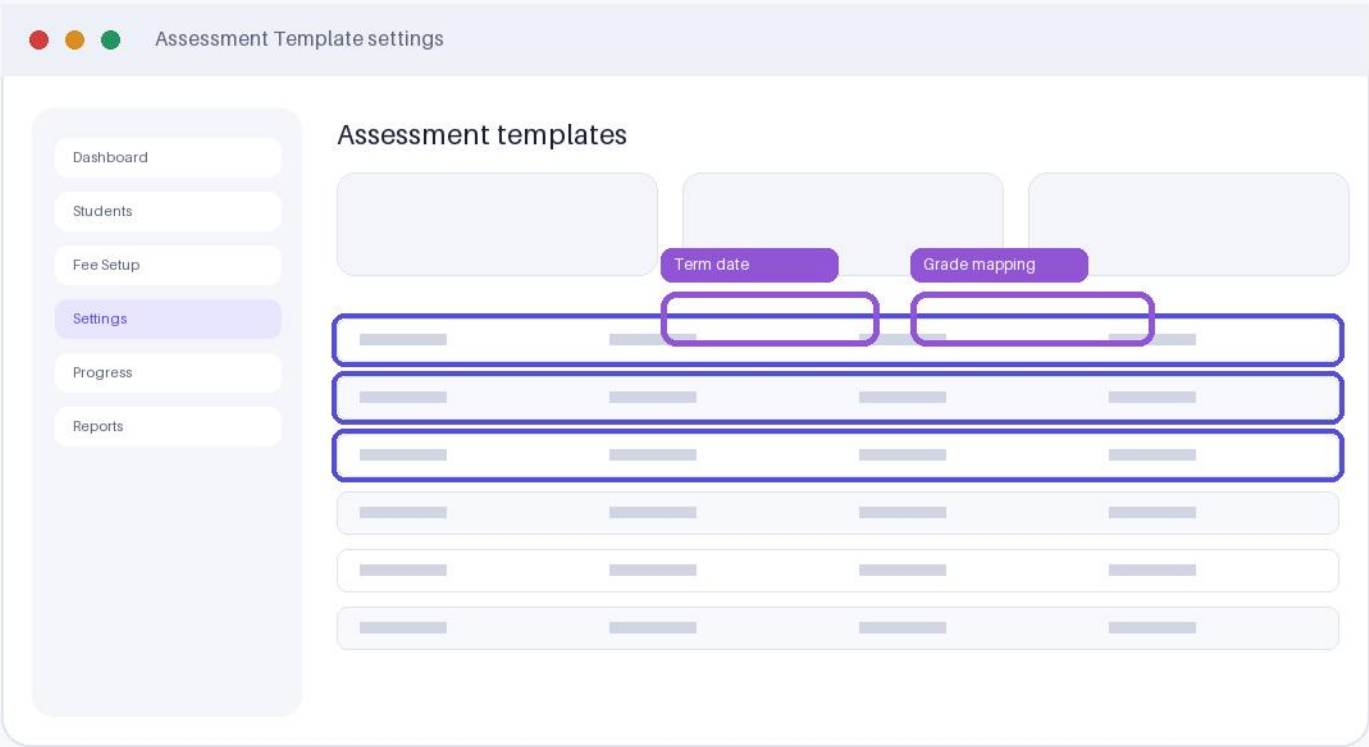

Parents can upload payment proof; admins verify, reject or record the payment.

4. Settings and templates

Settings controls school identity, payment QR, communication templates and assessment templates.

- **School profile**
Keep school name, phone, email, address, board and logo updated.
- **Payment QR**
Upload QR and UPI details; parent view uses this for payment guidance.
- **Assessment templates**
Create reusable term/exam templates with components, dates and grade mappings.
- **Uniform grade mappings**
All schools should receive grade mappings through saved templates or AI-generated template defaults.

5. Student Progress: subjects and assessments

The progress module connects subjects, assessment templates, class assignment and marks entry.

● Subjects

Create master subjects and assign them to classes.

● Templates to assessments

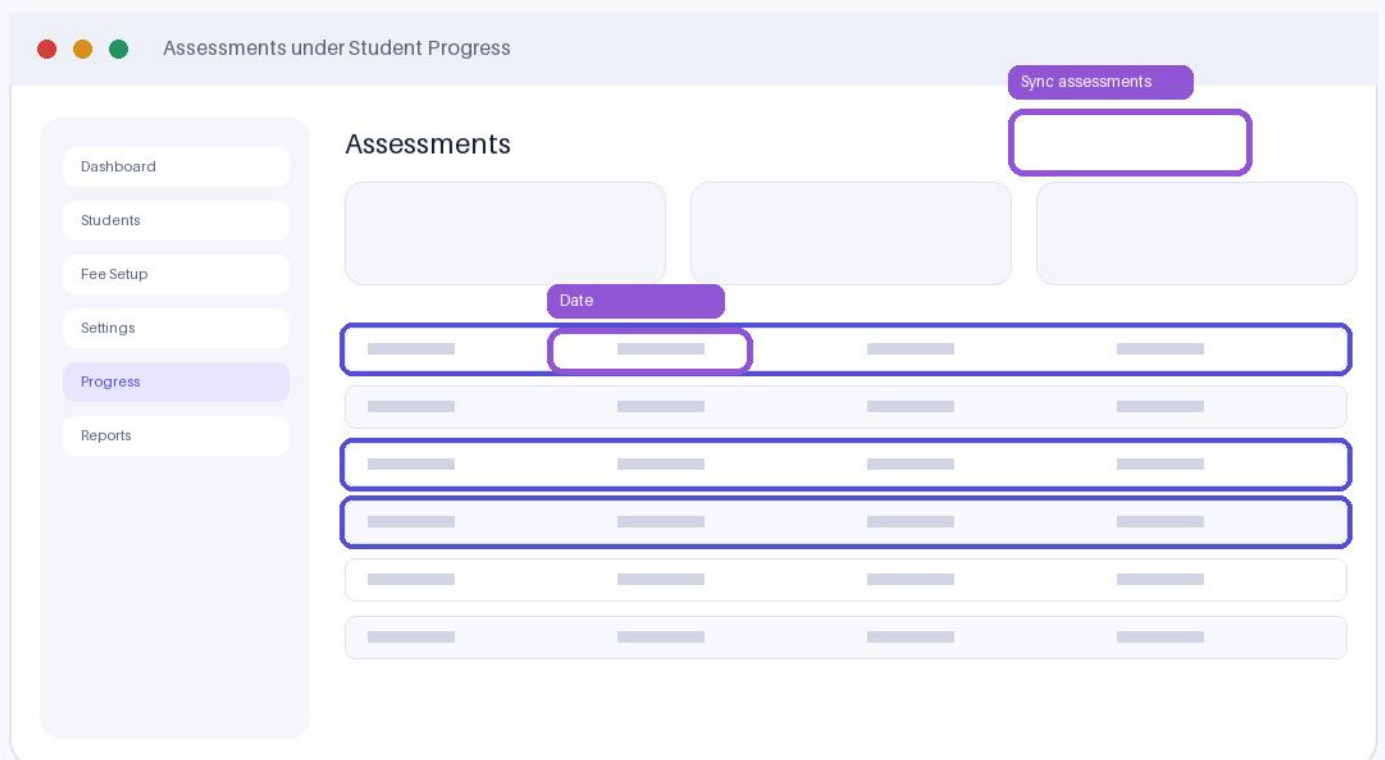

Class Assignment links a template to a class and creates matching assessments for the active year.

● Date fix

Template term dates are saved and synced into Student Progress assessments. Re-sync if old assessments had blank dates.

● Teacher filtering

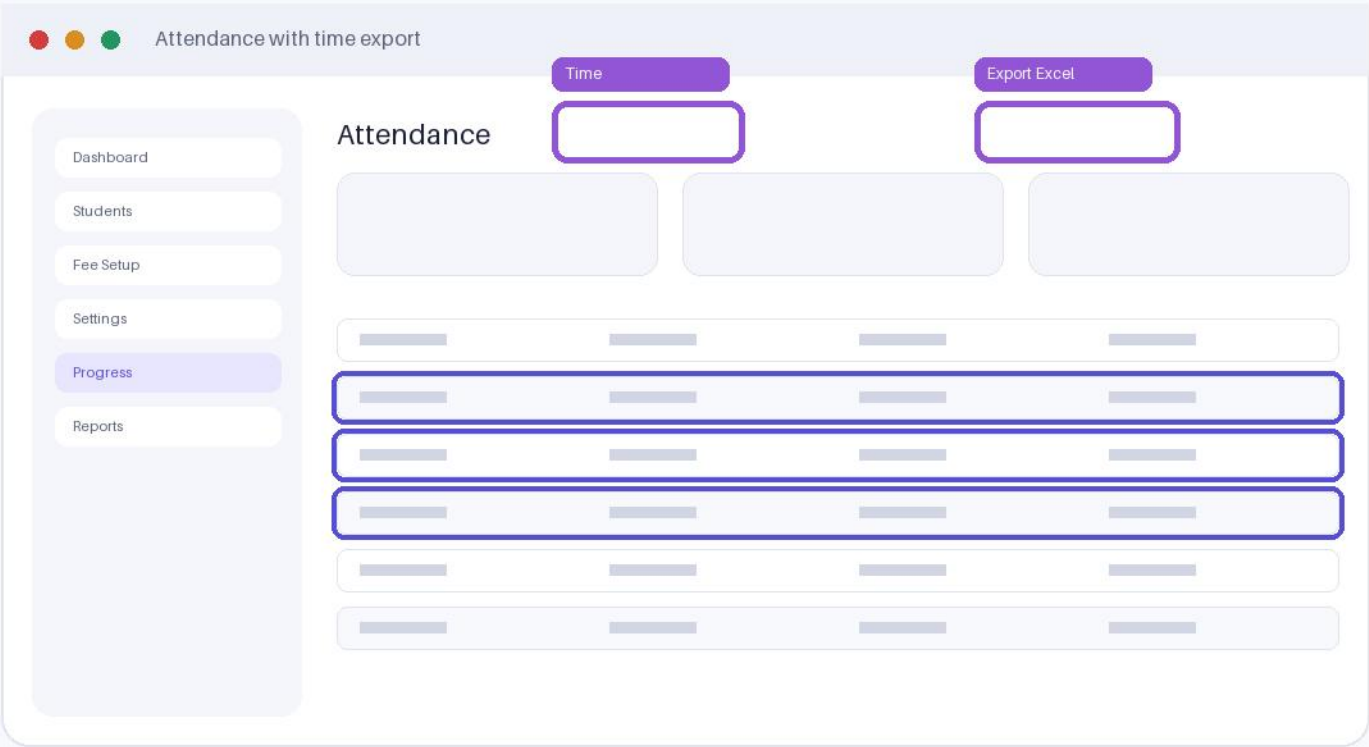

Teachers see only classes/subjects assigned to them.

6. Marks, attendance and report cards

Daily academic operations happen in Marks Entry, Attendance and Report Cards.

- **Marks Entry**
Select year, class, section, assessment and subject. Enter complete marks; auto-save reduces data loss.
- **Attendance**
Select date and time, mark status, and let fast auto-save persist records.
- **Excel export time**
Attendance export includes the recorded Time column because timetable is intentionally not implemented.
- **Report Cards**
Generate reports from assigned templates, marks, attendance and grade mappings.

7. Users, teacher portal and parent view

Access is role-based and intentionally limited by responsibility.

- **School Admin**

Full school operations: students, fees, settings, users and progress.

- **Teacher**

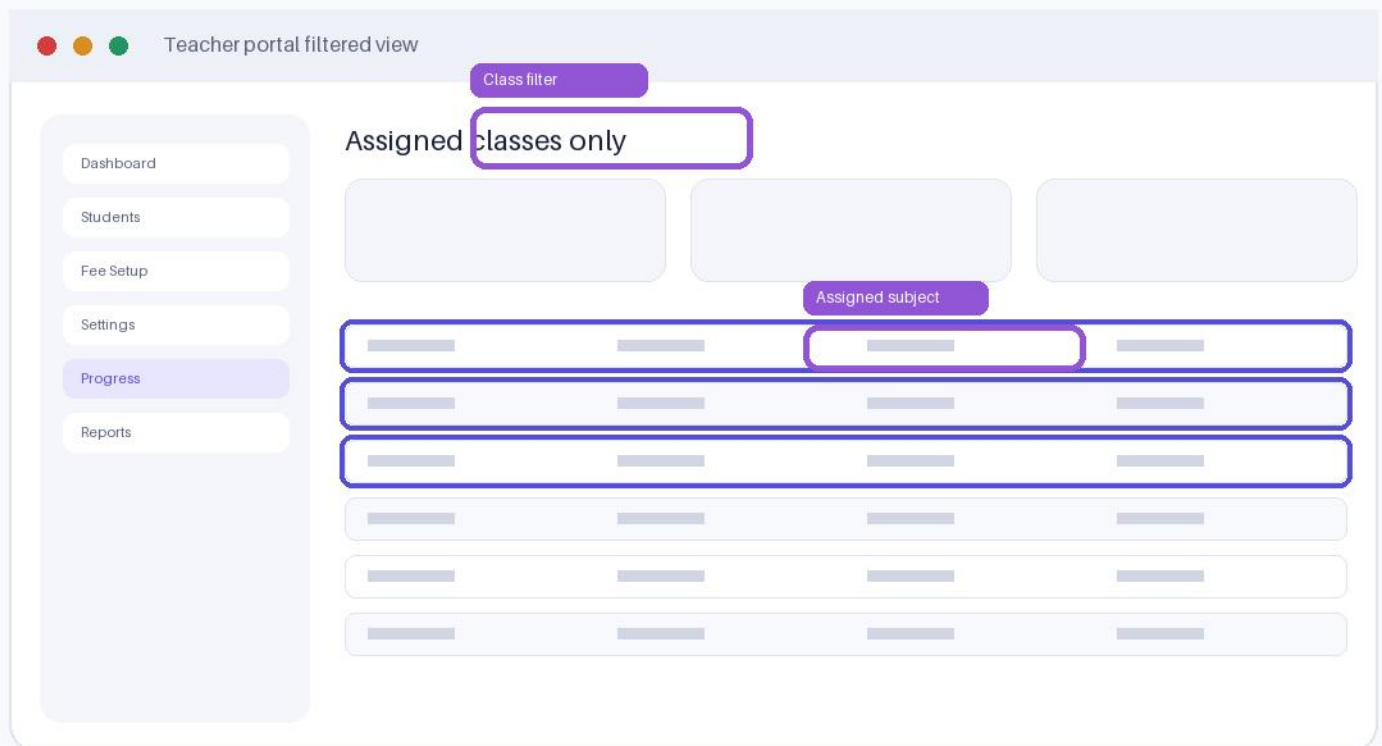

Student Progress access for assigned classes and subjects only.

- **Accountant**

Fee collection and payment workflows without academic module access.

- **Parent View**

Secure no-login link showing fees, payment proof upload, attendance/progress and school QR.

8. Exports and troubleshooting

Use exports for audit trails and operational follow-up. Re-sync templates when historical data is incomplete.

- **Student imports**

Download or inspect import issue rows when uploaded Excel has missing fields.

- **Fee reports**

Use class-wise, month-wise and student pending reports for collection review.

- **Attendance export**

Confirm Date and Time before export when tracking multiple class attendance sessions.

- **Assessment date gaps**

Add dates in Settings → Assessment Templates, then sync class assignments.

- **Grade mapping missing**

Open the template, confirm Custom Grades/Grade Mapping, save and use the same default template for every school.

9. Today's update summary

Latest fixes and operating rules included in this manual.

- **Teacher Report Cards filtering**
Report Cards follows teacher assigned class restrictions.
- **Uniform grade mappings**
New schools should get the same grade mapping capability as existing schools through templates.
- **Marks save behavior**
Marks entry should not interrupt partial typing with success messages on every digit.
- **Attendance auto-save**
Attendance auto-save is faster and avoids timer reset loops.
- **Attendance export time**
Excel export includes recorded time.
- **Assessment term dates**
Template terms support dates and sync them to Student Progress assessments.
